

Soil Testing Contacts

Below you will find contacts for soil testing laboratories in North Carolina that test heavy metals, organics, PAHs and PCBs, and dioxins. *(Note: These are not the same as the pH and nutrient testing offered for free or lost cost through the NC Division of Agriculture.)* Prices for these tests may range from \$45 to hundreds of dollars, depending on the type of contaminant and the number of samples, so it is best to have a clear indication that you want to test for a specific contaminant before you invest in a soil test.

Heavy Metals and Organics
